

# PitchDeck **RapidChain**

First user-oriented Blockchain

# Introduction

Blockchain technology has led transformative changes in various fields in recent years. However, this technology comes with its own set of challenges. RapidChain presents a user-centric approach aimed at overcoming these challenges.

## What is RapidChain?

RapidChain is a blockchain technology developed with a primary focus on user experience. This platform aims to overcome the challenges found in existing blockchain ecosystems and offers its users a safer, faster, and more decentralized experience. Drawing inspiration from the revolution sparked by Bitcoin, it aspires to provide users with the most decentralized and transparent ecosystem.

RapidChain encompasses several innovative features...

# Key features of RapidChain

**01**

Fee Balancer

**02**

DiPoS

**03**

RapidVM

# 01

## Fee Balancer

Adjusts transaction fees for optimal levels on RapidChain. Protects users from MEV attacks and high fee-induced value depreciation. Prevents fee wars, ensuring economical and stable network operation.

# 02

## DiPoS

Used by RapidChain for consensus and governance. Protects user assets and enhances scalability and decentralization.

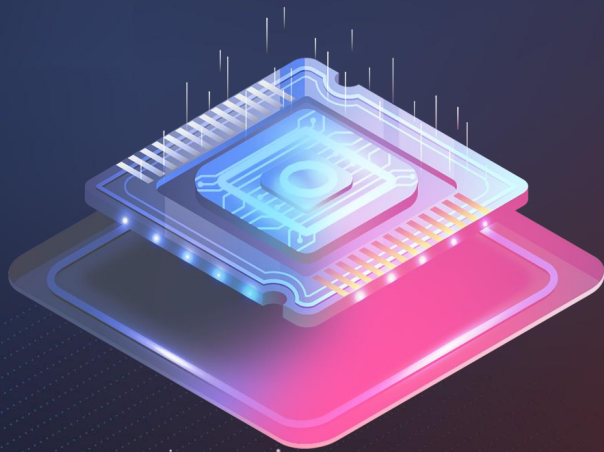

# 03

## RapidVM

Merges RapidVM with Tendermint for network integration. Enables compatibility with Ethereum Virtual Machine (EVM) and COSMOS. Supports decentralized apps developed on RapidChain to work with both EVM and WebAssembly (WASM)

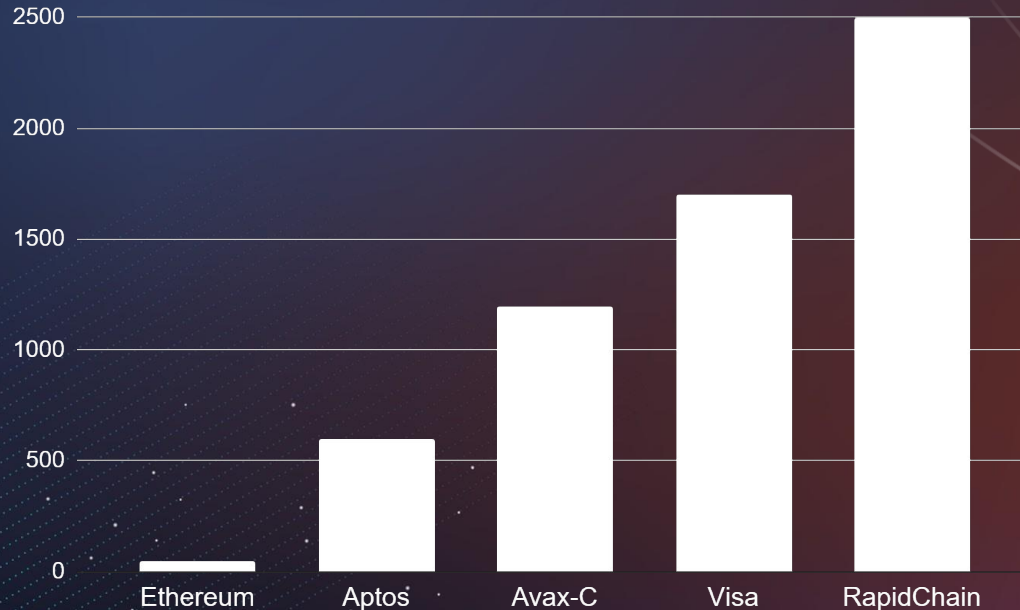

# Advantages of RapidChain

RapidChain is designed after closely examining existing blockchain ecosystems. It is specifically engineered to protect users from fee wars and other challenges within the EVM L1 networks. Prepared to align with both old and new blockchain ecosystems, it incorporates features from established systems while being adaptable to emerging ones.

# RapidChain and some other Networks

**TPS** stands for "transactions per second" and refers to the number of transactions a network can process in one second.

It's a key metric for assessing the scalability and capacity of a blockchain system.

# RapidVM

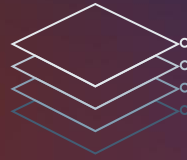

## Smart

Self-balances with its smart consensus

## Build

Dozens of user-friendly decentralized applications

## Scalability

Infinitely scalable blockchain structure

## Sustainability

Ecosystem with an infinite life cycle.

# Unique Wallets on RapidChain

**2024-May**

Public Testnet

**2024-Jun**

Mainnet with  
Foundation dApps

**2024-Jul**

Ecosystem Grants

**2024-Sep**

Multi-Layers for  
Unique dApps

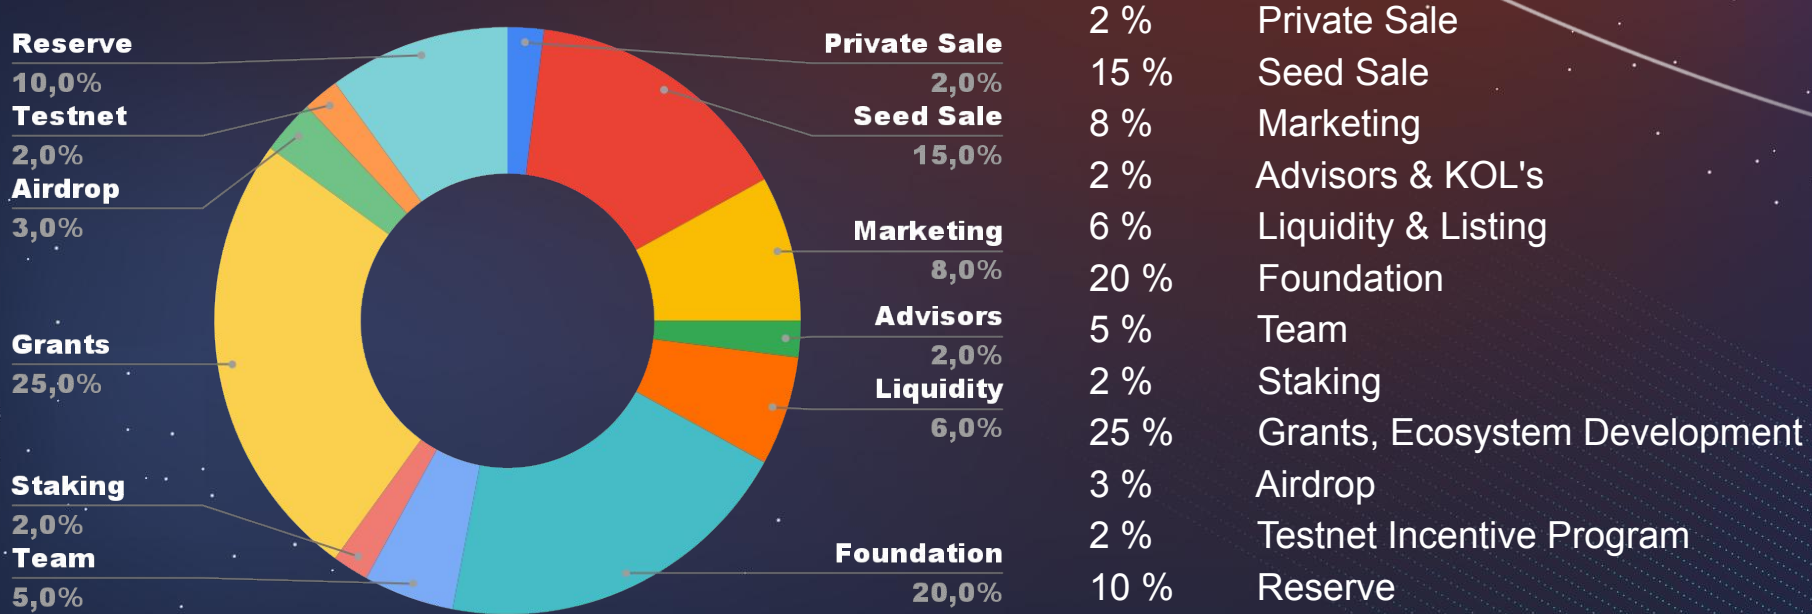

# Introduction to RAPID

The Rapid Token serves both as a unit of value and the main fuel for the RapidChain ecosystem. This token, essential for users' transactions within the network, plays a crucial role in the security of the network and the functioning of its consensus mechanism.
